[Arms Race or Innovation Race? Geopolitical AI Development Geopolitics.](#)

Author: Stefka Schmid, Daniel Lambach, Carlo Diehl, Christian Reuter **Type:** Article **ISSN:** 1465-0045, 1557-3028 **LCCN:** 2005214417 **OCLC Number:** (DE-599)ZDB2094935-2; (OCoLC)55591155; (CONSER) 2005214417; (CKB)110978984253576 **Publisher:** Frank Cass ; Taylor & Francis; Taylor and Francis **Place of Publication:** [London] ; Philadelphia, Pa. : **Publication Date:** 2025-08-08 **Pages:** 1907-1936 **Volume:** 30 **Issue:** 4 **DOI:** 10.1080/14650045.2025.2456019 **Tags:** Required **Notes:** China, the United States, and the European Union have spoken of a global competition surrounding Artificial Intelligence (AI). There is widespread talk of an 'AI Arms Race'. But what is the nature of this race? We argue that the arms race metaphor does not capture the dynamics of global competition in the AI sector. Instead, we propose the notion of a 'geopolitical innovation race' for technological leadership in a networked global economy. Based on an analysis of government documents, we find

that actors (1) are open to both zero-sum and positive-sum approaches in AI development, (2) organise actor networks differently based on national innovation cultures, (3) prioritise economics and status next to security concerns, and (4) are open to how AI should be interpreted. Referring to the competitive race of AI research and development, the three technopoles perpetuate the geopoliticisation of innovation and intertwine security and economic interests.

[Cyber War Will Not Take Place](#)

[The Journal of strategic studies.](#)

Author: Thomas Rid **Type:** Article **ISSN:** 0140-2390 **LCCN:** 2009236514 **OCLC Number:**

(DE-599)ZDB2075792-X; (OCoLC)52801649; (CONSER) 2009236514; (CKB)954925470327 **Publisher:**

Routledge **Place of Publication:** London ; Abingdon, UK : **Publication Date:** 2012-02-01 **Pages:** 5-32 **Volume:**

35 **Issue:** 1 **DOI:** 10.1080/01402390.2011.608939 **Tags:** Recommended **Notes:** For almost two decades, experts and defense establishments the world over have been predicting that cyber war is coming. But is it? This article argues in three steps that cyber war has never happened in the past, that cyber war does not take place in the present, and that it is unlikely that cyber war will occur in the future. It first outlines what would constitute cyber war: a potentially lethal, instrumental, and political act of force conducted through malicious code. The second part shows what cyber war is not, case-by-case. Not one single cyber offense on record constitutes an act of war on its own. The final part offers a more nuanced terminology to come to terms with cyber attacks. All politically motivated cyber attacks are merely sophisticated versions of three activities that are as old as warfare itself: sabotage, espionage, and subversion.

[We are all \(not\) Anonymous: Individual- and country-level correlates of support for and opposition to hacktivism](#)
[New media & society.](#)

Author: Leanna Ireland **Type:** Article **ISSN:** 1461-4448, 1461-7315 **LCCN:** 2020205106 **OCLC Number:** (DE-599)ZDB2016312-5; (OCoLC)41552129; (CONSER) 2020205106; (CKB)963017836282 **Publisher:** Sage Publications **Place of Publication:** [Thousand Oaks, Calif.] : **Publication Date:** 08/2024 **Pages:** 4429-4453

Volume: 26 **Issue:** 8 **DOI:** 10.1177/14614448221122252 **Tags:** Required **Notes:** Hacktivists oftentimes challenge or subvert existing power relations or structures and attempt to promote reform. How the public perceives occurrences of hacktivism can influence the direction and impact of operations, including their potential success. Public support can encompass person power, computational ability, resources and solidarity, among other things. This study examines socio-legal contexts in which an individual is embedded and personal perceptions as predictors for support for hacktivism. Using representative survey data from 23 countries (n = 23,140), the study finds that more effective civic participation mechanisms and more positive views toward alternative actors and hacktivists' utilitarianism motives were associated with heightened support. In contrast, greater trust in legal and state authorities promoted opposition. Effective justice was not associated with more support but was with less opposition for hacktivism. Implications for campaigns, social movements, and desistance of activity are discussed.

[The digital repression of social movements, protest, and activism: A synthetic review](#)

Author: Jennifer Earl, Thomas V. Maher, Jennifer Pan **Type:** Article **Publisher:** American Association for the Advancement of Science **Publication Date:** 2022-03-09 **Pages:** eabl8198 **Volume:** 8 **Issue:** 10 **DOI:** 10.1126/sciadv.abl8198 **Tags:** Required **Notes:** Repression research examines the causes and consequences of actions or policies that are meant to, or actually do, raise the costs of activism, protest, and/or social movement activity. The rise of digital and social media has brought substantial increases in attention to the repression of digital activists and movements and/or to the use of digital tools in repression, which is spread across many disciplines and areas of study. We organize and review this growing welter of research under the concept of digital repression by expanding a typology that distinguishes actions based on actor type, whether actions are overt or covert, and whether behaviors are shaped by coercion or channeling. This delineation between broadly different forms of digital repression allows researchers to develop expectations about digital repression, better understand what is "new" about digital repression in terms of explanatory factors, and better understand the consequences of digital repression.

10.1016/j.infoandorg.2019.04.001 **Tags:** Recommended **Notes:** Digital activism provides new opportunities for social movement participants and social movement organizations (SMOs). Recent IS research has begun to touch on digital activism, defining it, exploring it, and building new theory to help understand it. This paper seeks to unpack digital activism through an exploratory literature review that provides descriptions, definitions, and categorizations. We provide a framework for digital activism by extending Milbrath's (1965) hierarchy of political participation that divides activism into spectator, transitional, and gladiatorial activities. Using this framework, we identify ten activities of digital activism that are represented in the literature. These include digital spectator activities: clicktivism, metavoicing, assertion; digital transitional activities: e-funding, political consumerism, digital petitions, and botivism; and digital gladiatorial activities: data activism, exposure, and hacktivism. Last, we analyze the activities in terms of participants, SMOs, individuals who are targeted by the activity, and organizations that are targeted by the activity. We highlight four major implications and offer four meta-conjectures on the mechanisms of digital activism and their resulting impacts, and reveal a new construct where participants digitally organize yet lack an identifying cause, which we label connective emotion.

Week 11 - Regulating Transnational Cybercrime and Sovereign Interests

[Go to section](#)

The prosecution of cybercrime – why transnational and extraterritorial jurisdiction should be resisted

International review of law, computers & technology.

Author: Paul Arnell, Bukola Faturoti **Type:** Article **ISSN:** 1360-0869 **LCCN:** 2016250524 **OCLC Number:** (DE-599)ZDB2002101-X; (OCoLC)37915533; (CONSER) 2016250524; (CKB)954921429696 **Publisher:** Routledge **Place of Publication:** Abingdon, Oxfordshire, England : **Publication Date:** 2023-01-02 **Pages:** 29-51 **Volume:** 37 **Issue:** 1 **DOI:** 10.1080/13600869.2022.2061888 **Tags:** Required **Notes:** Cybercrime is a scourge that blights the lives of many around the globe. It has a significant transnational component. Despite established international and national regulation, its growth in scale and breadth persists. One result of which has been increased recourse to transnational and extraterritorial jurisdiction. This is misplaced. There are a number of factors militating against it. The foundations of international law, human rights, the interests of justice, complexity and cost and the underlying purposes of criminalisation conspire to demand a reconsideration of the use of transnational and extraterritorial jurisdiction in the fight against cybercrime. While there are undoubted difficulties attendant to the alternative, enhanced subjective territorial regulation and enforcement, it is undoubtedly the most effective long-term means of fighting cybercrime. The normalisation of transnational and extraterritorial cybercrime jurisdiction should be resisted.

14648849241304380 **DOI:** 10.1177/14648849241304380 **Tags:** Required **Notes:** Over the past years, misinformation has attracted considerable attention in communication research. While there is now general agreement on what constitutes misinformation, the applicability of relevant definitions to fact-checking practices, computational fake news detection, and legal sanctions is minimal. More importantly, the definitions do not clarify what contributes to information falsity. This article argues that in clarifying the nature of misinformation, the

content's format, the author's intent, and opinionated information are less of a concern than the traits used to construct misinformation. To make progress in identifying the causes of fake news, the various traits used to construct misinformation should be considered prior to inferring the author's intentions, but not vice versa. Based on the findings of existing taxonomies and the labels used to provide conclusions in fact-checking reports, a typology framework is proposed, dividing false information into four main categories: fabrication, manipulation, misinterpretation, and providing incomplete information. Such a framework is anticipated to demonstrate practicality for detecting misinformation online. Given that different kinds of false information have different implied intentions, different implications for fake news detection and governance are expected.

technological revolution, particularly the availability of more data and more powerful computational tools, has led to the emergence of a new scientific field called "Computational Diplomacy". Our work tries to define its scope and focuses on a popular subarea of it, namely "Digital Democracy". In recent years, there has been a surge of interest in using digital technologies to promote more participatory forms of democracy. While there are numerous potential benefits to using digital tools to enhance democracy, significant challenges must be addressed. It is essential to ensure that digital technologies are used in an accessible, equitable, and fair manner rather than reinforcing existing power imbalances. This paper investigates how digital tools can be used to help design more democratic societies by investigating three key research areas: (1) the role of digital technologies for facilitating civic engagement in collective decision-making; (2) the use of digital tools to improve transparency and accountability in governance; and (3) the potential for digital technologies to enable the formation of more inclusive and representative democracies. We argue that more research on how digital technologies can be used to support democracy upgrade is needed. Along these lines, we lay out a research agenda for the future.
